

MealTime

Team 10 - Sprint 2 Planning Document

Evan Klein, Peter Kfoury, Patrick Sullivan, Sam Richardson, Logan Stout, Nick Franz

Sprint Overview

In this sprint, our team should have a better handle of the two frameworks that we are using, React for the frontend and Ruby on Rails for the back-end. A lot of the past sprint was grasping the two frameworks as they were new to almost everyone on the team. With that in the past, we can now focus the majority of the time on finishing incomplete user stories from sprint one and start new user stories in this sprint. Our main focus this sprint is to tie the loose ends of sprint one together by finishing the core functionality of Mealtime on both the front and the backend. The core functionality being: logging in, finishing the profile and customizing it, and expanding the amount of endpoints in the backend so the frontend can communicate to the database.

SCRUM Master: Patrick Sullivan

Meeting Plan: Mondays 6:00 PM, Wednesdays 2:00PM

Risks and Challenges

One of the biggest challenges we will face this sprint is making sure not to underestimate how many hours it takes to do something. Almost all of our user stories took more time than planned on the first sprint planning document. Another challenge we will face is coordinating together better. Our communication is great, but actually getting everybody together and in one room has been difficult, mainly because our group is large and everyone has a different schedule, or has a job. Another minor challenge is better prioritizing what user story should go in which sprint. We put a lot of user stories on sprint one, which would have been better suited for sprint two or three.
